REACT JS
JAVA SCRIPT
TAILWIND
BOOTSTRAP
HTML
CSS

• Version Control

GIT AND GITHUB

EDUCATION

Bachelor of Science (Information Technology)

Valia Collage - Mumbai India

CERTIFICATIONS

Python Full Stack Developer

Try-Catch

PROJECTS

EVENTO (EVENT MANAGEMENT SYSTEM)

- Secure user authentication and authorization using SIMPLE JWT, ensuring access control and data security.
- CRUD functionality for managing events, attendees, and other relevant data, providing flexibility and control over event management.
- Filtration options allowing users to filter events based on date and categories, facilitating easy navigation and discovery.
- Events are automatically deleted from the system once their scheduled time expires, maintaining the relevance and accuracy of the platform.
- Seamless integration with a secure payment gateway for handling event registrations, ticket purchases, and other transactions, ensuring smooth and secure payment processing.
- Built-in QR code generator to create unique QR codes for each event, streamlining attendee check-ins and enhancing overall event management efficiency

STICKY NOTES

- Users create a profile during registration. Users can update their profile information.
- Users can store tasks in Notes. Notes can be color-coded
- Secure user authentication and authorization using SIMPLE JWT, ensuring access control and data security.
- CRUD functionality for managing events, attendees, and other relevant data, providing flexibility and control over event management.
